Cryptocurrency 2.0 Report

Description:

This report targets potential investors in next-generation cryptographic application projects, often called 'cryptocurrency 2.0', or 'crypto 2.0'. It is designed to help them understand and navigate a fast-moving space, in which many definitions are still vague and amorphous.

The report arrives at some definitions, drawing boundaries that may help investors decide which projects should be included in such a category, and which do not qualify. It also highlights some of the possibilities for these projects, which are still mostly in nascent form.

What future business models might they facilitate, and how?

Highlights include:

- An explanation of what can be considered a next-generation decentralised app (NGDA)
- A brief history of NGDAs and how bitcoin technology made these projects possible
- An overview of some of the most prominent cryptocurrency 2.0 projects, from smart contract platforms to prediction markets
- An overview of some of the key challenges many of these NGDAs face

Contents:

1. Executive Summary

2. What is a Next-Generation Decentralised App?

- The History of NGDAs
- Development of coloured coins
- The evolution of NGDAs
- Crowdsales
- Smart Contract
- Distributed Autonomous Organisations

3. Different Models of NGDA Applications for

- Smart Contract Platforms
- Asset Creation/Exchange
- Crowdsales/Crowdfunding
- Notarisation
- Prediction Markets
- Sidechains/Interoperable chains
- Supply chain management
- Transportation
- Storage
- Social Networks

4. Challenges to the NGDA Industry

- Interoperability
- User appeal
- Regulation

5. Conclusion

6. Key Concepts/Glossary

Companies

Mentioned

- BitShares
- Blockstream
- COlu
- Chromawallet
- Codius
- CoinPrism
- CoinSpark
- Counterparty
- Eris
- Ethereum
- Filecoin
